

Claims of the Invention

What is claimed is:

- 1 A clock comprising means for actuating a hand to indicate day of the week.
- 2 A clock as described in claim 1 wherein said means for actuating said hand comprises at least one gear having a rotation cycle of 7 days.
- 3 A clock as described in claim 2 wherein said gear communicates with at least one other gear that completes 14 revolutions in said cycle.
- 4 A clock as described in claim 3 wherein said other gear actuates at least one hand to indicate hours.
- 5 A clock as described in claim 1 wherein said means comprises quartz oscillation.
- 6 A clock as described in claim 1 wherein said means comprises battery power means.
- 7 A clock as described in claim 1 further comprising means for adjusting time indicated by said clock.
- 8 A clock as described in claim 1 wherein said adjustment means comprises at least one knob.
- 9 A clock as described in claim 1 wherein said adjustment means comprises at least one second knob to adjust said day indicator.
